Partnering for better outcomes

# Bühler Quality Management

Producing cost-effective and constant product quality is the ultimate goal of any flour mill. Besides, the way employees manage and exchange information across their business is essential for optimizing operations.

How is your sampling process handled today? Is quality data collected, stored and reported efficiently? Are quality specifications of your product always at the right level? Do you suffer from quality deviations? Let us help you optimize processes and resources to maximize profits.

## Bühler Quality Management portfolio includes:

- Automated data collection, centralization and transfer across your business
- Quality limits and automatic process reaction to any deviations
- Ultimate quality data traceability and digital reporting
- 24/7 inline quality monitoring
- Data analytics to gain the ability to foresee potential quality issues before they escalate

## Requirements:

- Updated Bühler Automation system, and any peripheral hardware to control quality (MultiNIR, Lab devices, automatic sample collector...)

## Benefits

### Maximize profit

- Consistent product quality
- Stable production
- Real-time quality control
- Zero deviations
- Optimization of product blending

### Reduce labor and errors

- Reduce lab tests
- Operate without paper
- Eliminate manual errors
- Reduce employees involved in quality processes

### Increase traceability

- Production and quality data together
- Save, retrieve and report digitally
