

UniLine

Modular rice milling line

Minimal space, maximum efficiency

Rice milling, the easy way

The one-stop solution for flexible rice milling

Introducing UniLine, a revolution in rice mill engineering. With a line concept that uses less space, less energy and less grain travel time, our dedicated new rice line redefines the word efficiency.

Embrace new levels of flexibility with changeable modules, enjoy the support and ease of a single solution provider, and step into engineering excellence with a rice line that gives more for less. Effortlessly configure your unique process flow, ranging from 4 to 10 tph.

The numbers

Benefits of UniLine

Small size with big performance for less cost

UniLine is a revolution in engineering, taking up less space and energy, and giving greater efficiency and yield. It's compact, but productive. The compact layout means that grain travels half the distance, cutting back on rice breakages, while the mill's reduced size and engineering efficiency mean that you access a big mill's performance without a big mill's energy cost. With a 23% reduction in energy, UniLine benefits the environment and your profits.

One-stop shop for your rice milling needs

UniLine is a turnkey solution that offers the complete rice milling process in a new and easy way. Whether you choose a full-service installation, or choose to source some parts locally, we make rice milling flexible and easy.

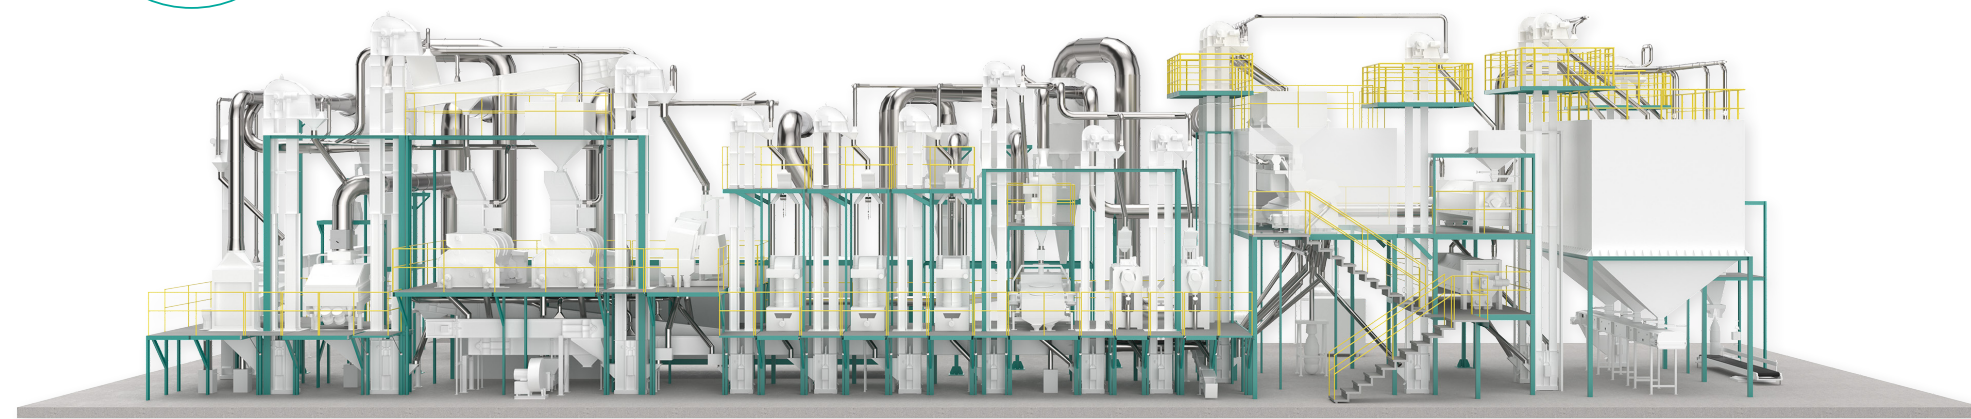

Embrace the benefits of having one point of contact to make support simple, and one turnkey solution to simplify the purchase, installation, operation, and profit. We make rice milling easy.

One operator, one standpoint, one line

UniLine's design means a single operator can effectively supervise the entire line from a single standpoint, cutting down on operational error, labor costs and training, while maximizing the speed of intervention and peace of mind.

While a traditional mill brings large empty spaces and multiple stories to climb up and down, UniLine operates on a single fully visible line.

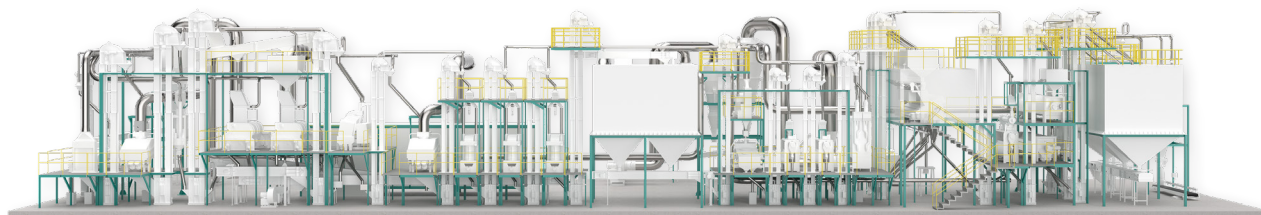

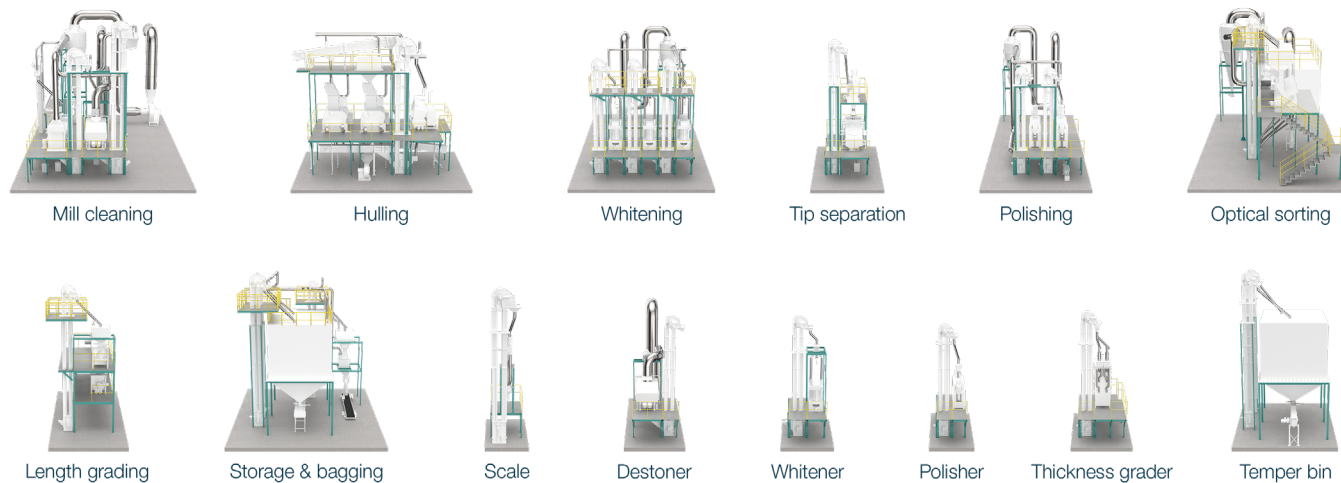

Modular and Flexible

Personalize UniLine to your needs

Pick and choose modules that work for you

With UniLine, you can add, change, or remove modules to fit your needs. Switch between machines to match your capacity and operational requirements and create a personalized line that always fits seamlessly together. From cleaning through to sorting and grading, each machine carries the time-proven quality and reliability of Bühler. Want to expand in the future? UniLine makes it easy to extend your process with additional machines, adapting seamlessly to your demand.

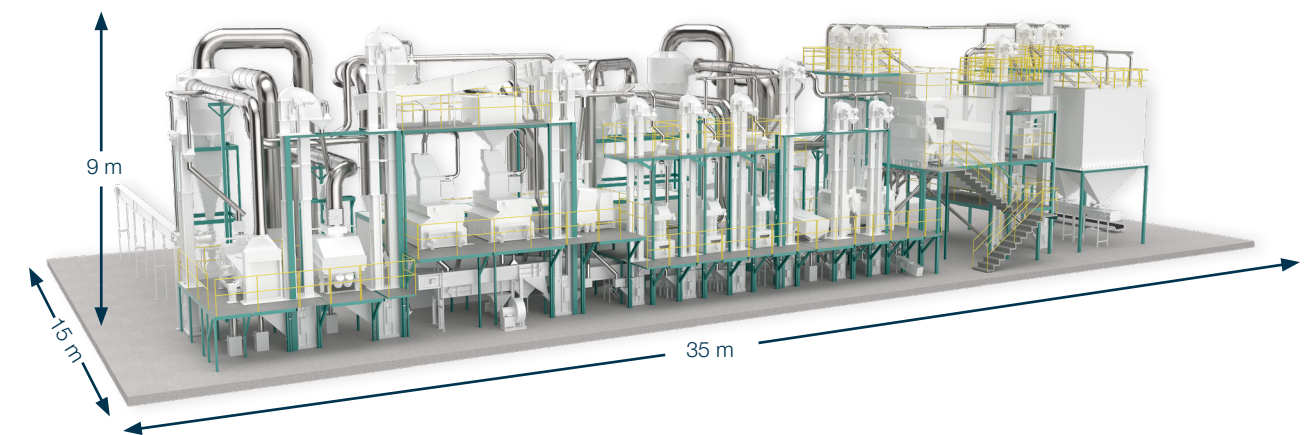

Engineering Excellence

UniLine and it's measurements

Measurements that show engineering excellence

The base version of UniLine is only 9 meters high, 15 meters wide, and 35 meters long. That resumes in 30% smaller footprint, compared to a conventional rice mill. Smaller footprint also provides 60% faster cleaning, 50% less grain travel distance and cutting down your energy costs, while improving grain quality and plant availability. UniLine is fast to install, operate and create profit.

We chose Bühler because we felt they offered the best engineering advice to design the most optimal plant.

- Dineth Gunathilake, Managing Director

Don't just take our word for it

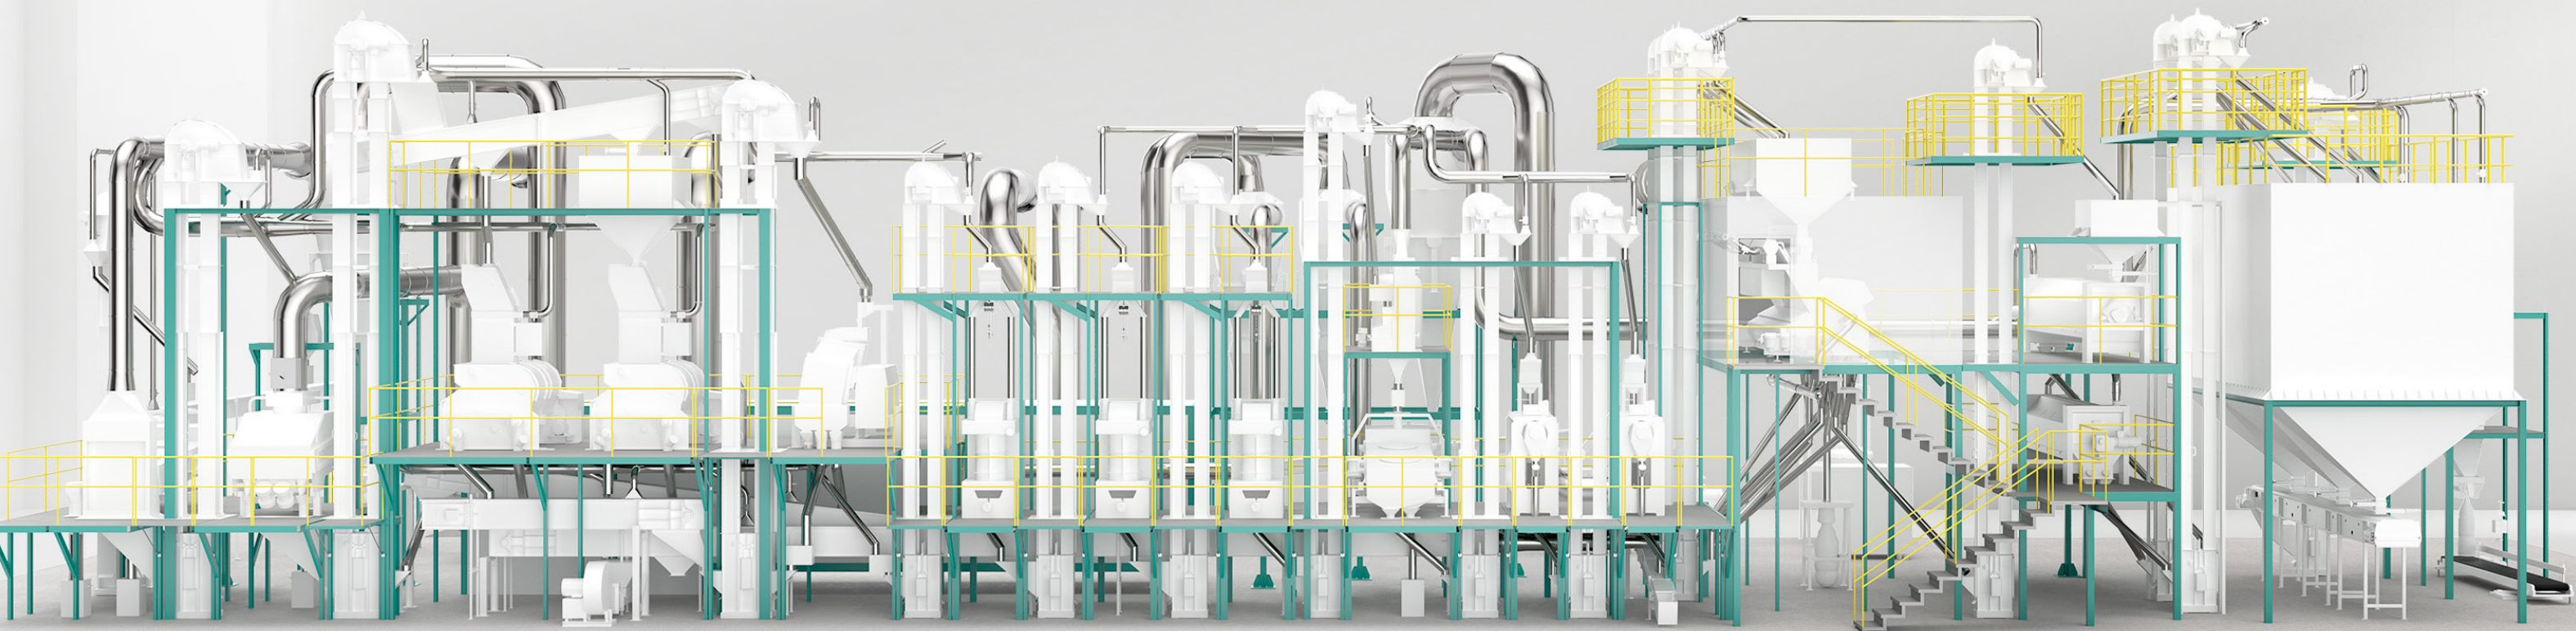

The Lathpandura Agribiz rice mill in Sri Lanka has enjoyed the benefits of UniLine. In only 3 months, the company has a fully operational UniLine. They have reported that the line has cut cost and energy consumption, that it is easier to maintain, and requires less labor.
