

## Mobile access and flexible data input

The Companion Plus App is designed to drive operational excellence and continuous improvement. Transparent and centralized data analytics together with features like production scheduling, OEE monitoring with biggest losses and root causes, quality tracking, and task management make it easier for users to plan, analyze, and continuously improve plant operations.

## Benefits

### Full transparency

regarding biggest losses and root causes for downtimes or performance losses. This allows to compare the efficiency of different lines or plants.

### Continuous improvement

of plant operations with focus on availability, performance and quality.

### Mobile access and flexible data input

to link lab quality results with production jobs.

### Full integration

with Mercury MES and Bühler insights via API.

### Maximum flexibility

with self-configuration of OEE.

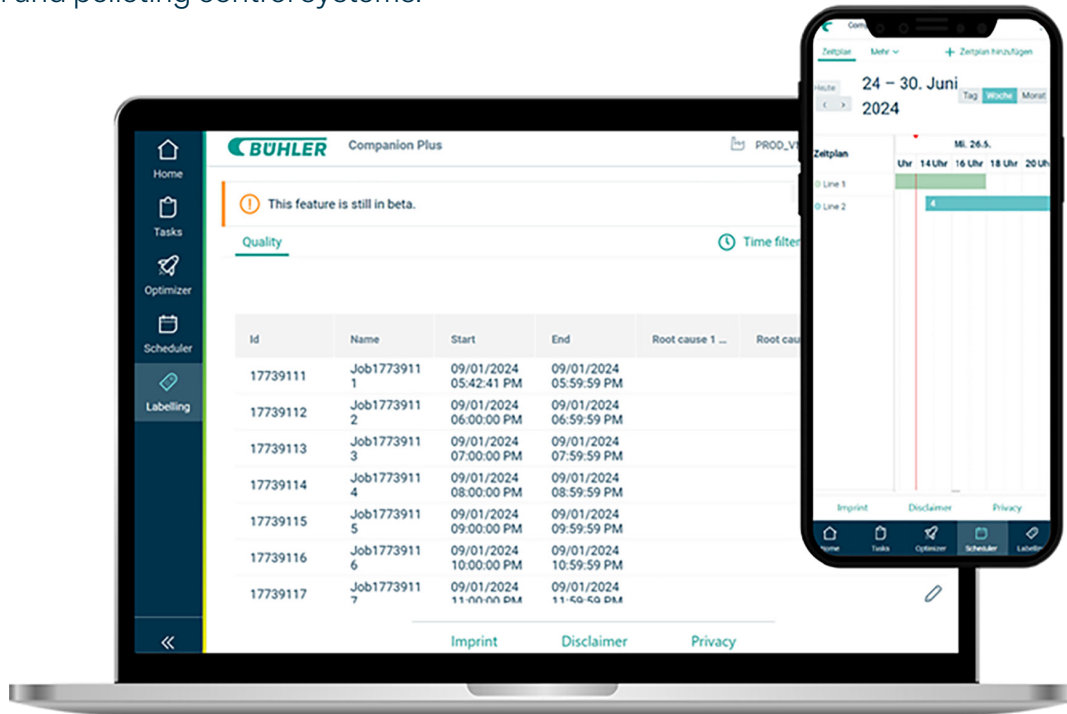

## Key features

- Mobile access and flexible data input
- KPI monitoring directly in the app
- Production time scheduler to track planned production time of every shift
- Lab quality integration to reduce paperwork
- Task management to support improvement process
- OEE tracking via dashboard showing biggest losses and root causes

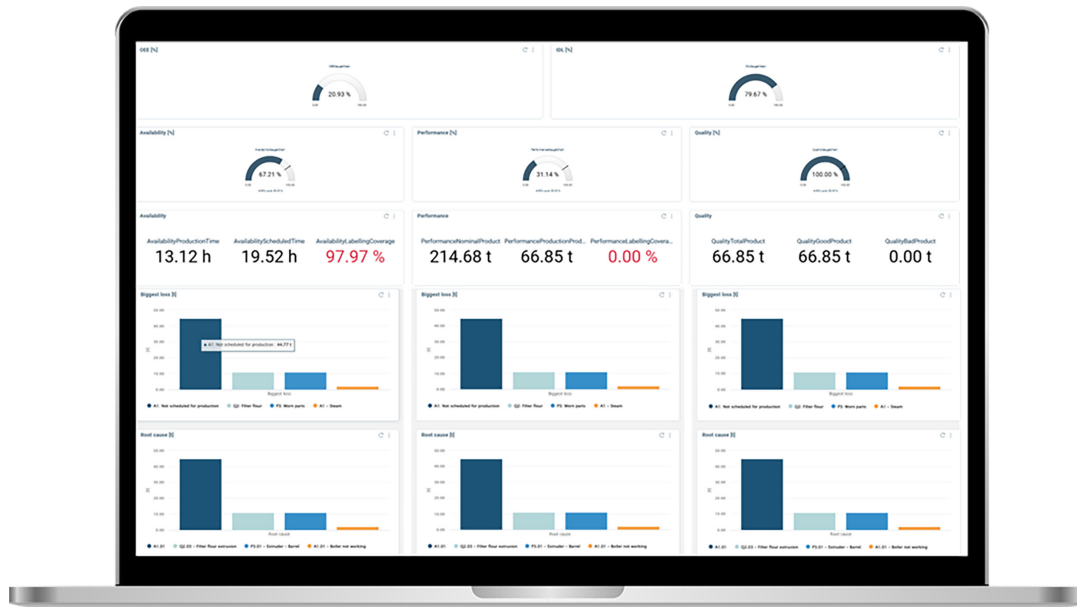

# Technical specifications

## Compatibility

Companion Plus works with later generation WinCos, Mercury plant control systems and latest extrusion and pelleting control systems.

Picture 1: Mobile access to label biggest losses and to schedule planned production

Picture 2: OEE dashboard incl. biggest losses and root causes for continuous improvement
