

Grinding Portfolio

Next Generation
Size Reduction

Global markets request. **Safe, energy efficient and high performance grinding lines.**

With over 160 years of industry experience and continued cutting edge research and development, Bühler is proud to present the next generation grinding portfolio, with all new and updated equipment to bring the highest performance and value for your business.

Grinding experts for generations. **Bühler offers end-to-end grinding solutions.**

Bühler offers everything from turnkey solutions, to application centers for testing to engineering, installation and commissioning options. How can Bühler experts help you deliver more with less energy, maintenance and waste than ever before.

Grinding is one of the most energy intensive parts of your plant

In a more competitive environment, Bühler supports you to do more with less in your grinding lines - from newest generations of energy efficient equipment, to digital process and control loops that can dramatically reduce your average energy per ton. Bühler enables you to deliver more with less energy, maintenance and waste than ever before.

Customer benefits

- Industry leader with global experience to serve your business
- Best in class equipment and services to improve your grinding process
- Offering next generation equipment, process and digital grinding services

The next generation grinding portfolios. **Highlight features.**

Full grinding lines **Complete grinding solutions** **for your needs**

Bühler offers the complete solution for full grinding lines for any situation. From sieving, conveying, storage, hoppers, gates, feeders, automation, fans, filters and safety equipment, we have you covered. We have industry leading experience in design, installation and commissioning of grinding lines.

Safety first **Operator friendly grinding lines**

All grinding lines and hammer mills can handle the most demanding explosion requirements as well as enable operator safety. We want you to have peace of mind that your people and plant are protected with safe and secure grinding lines.

Continuous innovation **We never stop our grinding** **innovations**

Our goal is to enable you to more effectively drive your business. Therefore we continue to invest in grinding innovation. Whether it is mechanical improvements, process innovation or digital solutions, we are bringing more efficient, effective and smart grinding solutions to market.

Service for demanding customers. **Available worldwide, reliable and fast.**

Lab services

The laboratories offer a broad range of analyses and testing of food and technical materials in order to innovate processes and improve equipment for our customers.

Spare and wear parts

Highest standards of reliability apply to original Bühler spare and wear parts. They are perfectly adjusted and ensure performance and production safety.

Training

At Bühler training centers – or at any site worldwide – specially trained experts pass on their hands-on expertise and knowledge to customers' employees.

Revision

Bühler evaluates, over hauls, adjusts or renews customer installations, including Bühler and non-Bühler machines.

Consulting

Strategic, plant performance, or energy consulting are just some of the consulting services to improve product quality, production processes and energy efficiency.

Repairs

Dedicated to minimizing downtime in the event of an incident: Fast and reliable technical repair service via the Bühler eTicket or the Bühler Helpline – worldwide, 24/7.

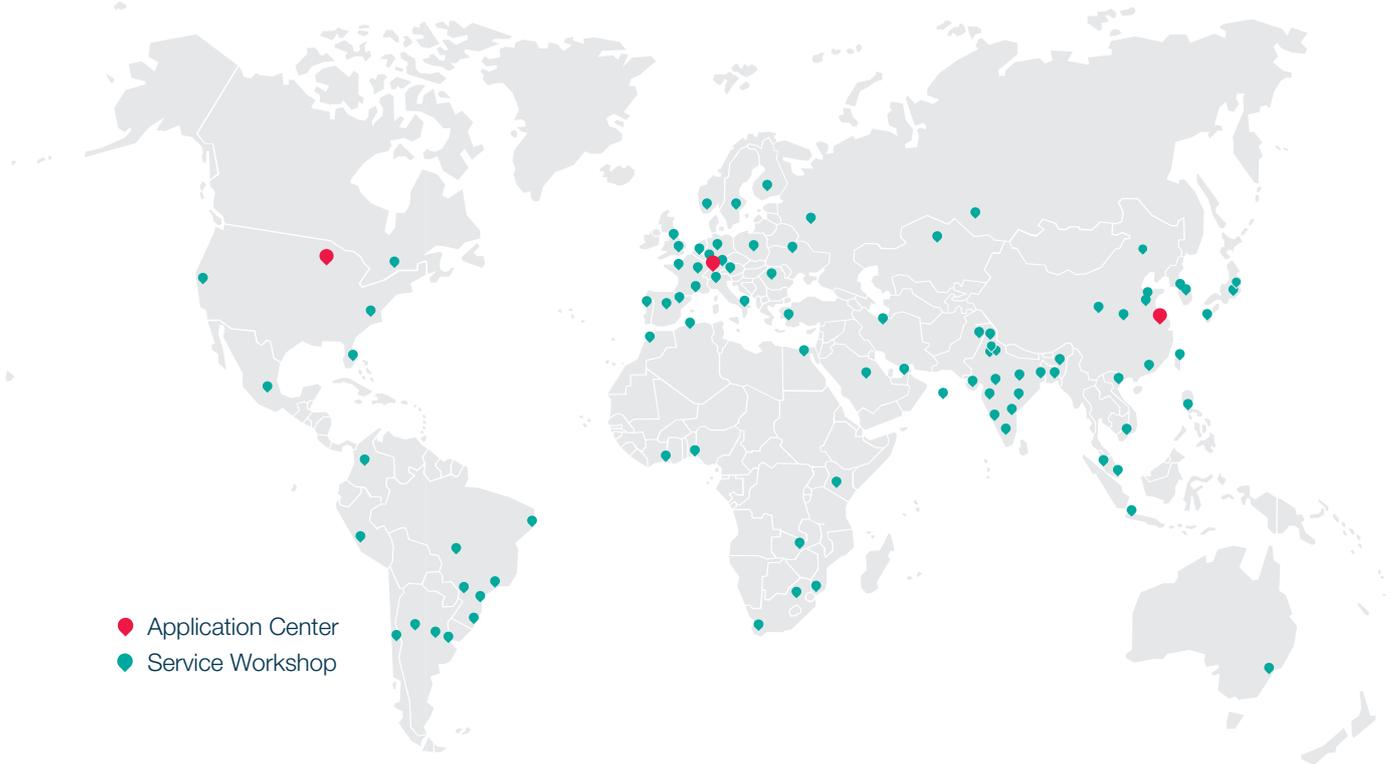

Maintenance

Packages are adjusted to fit production cycles to prevent downtime, loss in production efficiency or product quality, ranging from individual services to complete outsourcing of maintenance.

Retrofits

With individual upgrades and conversion kits, time-worn Bühler machines will perform to current standards of technology and efficiency.

Global expertise. Local presence. **A lifetime of customer service.**

Customer advantages.

- With specialist manufacturing and service locations all around the world, our support engineers and technicians are never far away, ready to help you resolve issues or take a proactive role in improving the overall performance of your facility.
- Join a seminar or let us train you in person. We run several workshops a year for theoretical and hands-on training. These can also be conducted at the Application Centers or at your production site.
- Work across multiple application centers to optimize all processes through the production line (e.g. grain technology and milling solutions) and develop end-to-end solutions.
