## Retrofit Self-adjusting knife scraper for roller mills

Are your scraper knives positioned correctly at all times?  
This retrofit ensures they are always set optimally without any need for manual interventions.

The **self-adjusting knife** fits optimally to the surface of smooth and fine corrugated rolls. The knife aligns itself to the roll without any need for manual adjustments, ensuring maximum operating hours with no manual interventions. Due to elimination of tightening screws, optimal pressure is being applied on the rolls at all times, ensuring even and reduced wear across the whole scraper blade.

### Benefits

#### Uptime

- Ensuring reliable scraping at all times
- No manual adjustments or readjustments needed

#### Personnel & machine safety

- No risk of over-tightening = no risk of damage to rolls
- Eliminate manual manipulations while machine is running

#### Food safety

FDA approved material

### Available for roller mill types:

- Airtronic MDDK/L, Newtronic MDDM/O, Dolomit MDDP/Q, Antares MDDR/T, Diorit MDDY/Z

### Retrofit kit includes:

- 2x Side plates for mounting (specific for each roller mill type)
- 2x Scraper assembly with flexible knife holder
- 2x Scraper knife

The installation time is approx. 30 min per roll pack.

Fast and easy installation as existing mounting points are used
