Retrofit Brushless synthetic scraper for roller mills

Food safety requirements are ever increasing. This retrofit improves hygiene standards and food safety of existing roller mills.

The brushless scraper is made of **solid synthetic material**, replacing traditional bristle brushes for corrugated rolls. It eliminates any product accumulation in the brush or risk for bristles in your product—resulting in increased food safety. Hovering tightly over the roll, the scraper experiences reduced wear and up to 3 times longer lifetime. This decreases maintenance costs and keeps your mill running for maximum amount of time.

Benefits

Food safety

- Eliminate product-accumulating deadspots
- FDA approved material

Cost reduction

Less wear results in fewer replacements needed

Uptime

Reduced maintenance efforts leading to increased operating time

Available for roller mill types:

- Airtronic MDDK/L, Newtronic MDDM/O, Dolomit MDDP/Q, Antares MDDR/T, Diorit MDDY/Z

Retrofit kit includes:

- 2x Side plates for mounting (specific for each roller mill type)
- 2x Scraper assembly
- 2x Solid synthetic scraper

The installation time is approx. 30 min per roll pack.

Fast and easy installation as existing mounting points are used.
