

Application & Training Center.

Bühler Bengaluru.

The Bühler Application & Training Center (ATC) is the place to test your ideas and drive innovations.

The Application Center at Bühler India is a state-of-the-art center with facilities to conduct product/machine trials and optimize processes based on the requirement.

In addition to testing and trials, the ATC conducts training across all operational levels - mill proprietors, managers, and operators.

The integrated application center provides hands-on working and operation training, allowing participants to understand end-to-end processes - from handling material at a commercial scale to final product packing.

Working together with Bühler's process experts, the center allows you to develop and test products for a variety of grain processing requirements.

Going from raw material to final product requires numerous steps. The goal of Bühler's experts is to help you discover ways to improve efficiency at every stage – whether it's the entire process or just one.

Available applications in the ATC
