OPC-Connect.

Connect your sorters, shape your business.

Automation and monitoring are essential to maximizing productivity.

Automation helps to achieve higher efficiency and accuracy in the production process, and when combined with process monitoring to enable better planning and decision-making, you have a recipe for success.

Our OPC-Connect solutions provide a flexible means of communicating with the SORTEX via industry-standard OPC-UA protocol.

Seamlessly integrate the data flow of your sorters with your chosen data analytics platform such as sorter capacity and ejection rate.

Control sorter settings directly from your automation system, synchronize sorter recipe change with the overall process recipe and remove the need for an operator presence at the sorter.

Benefits

– Complete, integrated monitoring and control solution
– Store and aggregate your data wherever you choose
– Create visibility of processes and monitor in real time

Customers can choose from three available options to best suit their needs:

OPC-Connect Data

Data export only

OPC-Connect Control

Data export and sorter control

OPC-Connect + SMS

Calculated data export and Sorter Control SORTEX Monitoring System

The OPC-Connect solution is implemented via the Bühler Insights Gateway hardware, making it easy to take advantage of a connection to SORTEX Monitoring System (SMS) in parallel. A subscription to SMS also unlocks some additional OPC benefits in the form of calculated, more insightful sorting metrics. Furthermore, you get access to the Bühler Insights platform with an easy-to-understand visualization of the key performance indicators and customized alerts.
