Azurit  
small plansifter  
**MPAU**

## High performance and separation accuracy For clean end products

The Small Plansifter Azurit is used for sifting and grading powdered and granulated products.

### Optimal space-performance ratio

The high throughput capacity of the machine combined with its high separation precision and small installation area ensure an excellent space-performance ratio.

### High sifting and grading flexibility

Thanks to various sieve frames, the flow sheet can be adapted to the specific requirements when sifting and grading different products.

### Minimal cleaning effort

All parts coming into contact with products are easily accessible and therefore also easy to clean. The wide front doors enable fast and user-friendly installation and exchanging of the sieve frames.

### Reliable operation

The Small Plansifter is made of high-quality materials and guarantees a long production lifecycle. The robust construction allows reliable operation with minimal maintenance requirements.

### Advantages

- Optimal space-performance ratio
- High sifting and grading flexibility
- Minimal cleaning requirement
- Reliable operation

## Nova sieve generation Excellent separation accuracy

### Nova sieve features

- High sifting performance with proven Nova sieve technology
- Multifunctional Nova sieve cleaner: cleans sieve cover and sieve trays at the same time
- Equipped with NovaPrime sieve fabric
- Sieve frames coated with synthetic resin for pure end products
- Wear-resistant metal insert sieve frames
- High availability and low maintenance

Small Plansifter				Capacity wheat flour*	Motor	Weight (net)
Number of sieve stacks	Number of sieves per stack	Number of fractions per stack	Sieve area in m <sup>2</sup>	t/h	kW	kg
2	10-12	2-5	8.1-9.7	18	2.2	1460
1	10-12	2-5	4.8	9	1.5	685

\*Capacity for wheat flour rebolting, @ 250 microns
