Conversion Kit Cenomic Optima

The details make the difference

Optimize your production

With the Cenomic Optima conversion set, Bühler offers process engineering-based optimization of your production. With the base kit, a Cenomic Optima adaptation is carried out on the agitator and product outlet. Additionally, individual conversion packages are selectable according to the condition of the machines:

- Ceramic inner lining
- Pulling-off device
- Optional increased drive
- And more

The benefits of Cenomic Optima technology generate 25% higher productivity* and temperature-protected grinding due to processing unit optimization. Minimized blockages and grinding media pressures continuously.

*Depending on product

Capacity

- Higher rate of production due to larger sieve area
- Better separation of grinding media
- Flow-optimized processing zone

Innovation

- Optimized dimensional characteristics in the processing zone
- More effective grinding
- Narrower distribution of particle sizes

Quality

- Larger sieve surface
- Minimal sieve blockage
- Constant product quality

Innovations for a **better world.**

Cenomic Optima – Conversion set

Optional: Pulling-off device for grinding container
(recommended for ceramic inner lining)

Optional: Ceramic inner lining

Optional: 30 kW drive unit

Larger sieve in container lid
